

CUNY Beyond Phase 9 - Reviewed Career Discovery and Catalog Expansion

Outcome

Phase 9 makes career matching easier to discover and substantially broadens the reviewed BMCC coverage. A student no longer needs to guess an exact accepted phrase: the career step now includes a searchable browser backed by the published career API.

Student-Side Functionality

- Open **Browse all reviewed careers** on the career-goal step.
- Filter by a job word such as nursing, accounting, counseling, technology, or planning.
- See how many reviewed BMCC program matches support each career.
- Choose a career with a keyboard or pointer and continue through the existing explainable matcher.
- Type a reviewed alias such as bookkeeper, case worker, law enforcement, city planner, or healthcare administrator and receive the correct canonical career match.
- Receive clear education or credential cautions for careers such as CPA, counseling, forensic psychology, and licensed legal practice.

Catalog Expansion

The catalog grew from 25 to 46 active careers and from 27 to 50 active career-program relationships. Newly represented program families are:

- Accounting A.A.S.
- Human Services A.S.
- Psychology General and STEM concentrations
- Criminal Justice A.A.
- Public and Nonprofit Administration A.S.
- Urban Studies A.A.
- Political Science A.A.
- Gerontology A.S.

The previous Computer Science, Data Science, and Nursing matches remain intact.

New Career Examples

Accounting Clerk; Accountant or Auditor; Case Manager; Community Organizer; Mental Health Counselor; Substance Abuse Counselor; Patient Navigator; Market Research Analyst; Psychology Research Assistant; Forensic Psychologist; Police Officer; Legal Advocate; Forensic Analyst; Public Administrator; Nonprofit Program Coordinator; Urban Planner; Political Analyst; Fundraising Specialist; Aging Services Coordinator; Geriatric Care Manager; and Health Services Administrator.

Evidence Rules

Every active career has at least one active program mapping. Every new mapping points to a populated curriculum and an official BMCC or BMCC OpenLab source. `strong` evidence is used when BMCC explicitly names the career or employment area. `related` evidence is used when the associate degree is a starting point and further education, licensure, certification, or transfer is normally part of the path.

The result is exploration guidance, not a guarantee of employment, licensure, transfer admission, or salary.

Technical Changes

- Expanded the two governed career CSV datasets.
- Added `program_count` to the public career catalog response.
- Added responsive and accessible career browsing to the public intake.
- Replaced the old three-example no-match message with a browser-oriented recovery path.
- Added tests for catalog size, program-family coverage, aliases, source domains, credential disclosures, and UI accessibility.
