

Run CUNY Beyond Locally on Windows

These instructions use Windows PowerShell.

Prerequisites

Install Git for Windows, Python 3.10 or newer, and a current browser. During Python installation, select **Add Python to PATH**. You need read access to the private repository.

```
git --version
python --version
```

1. Download the repository

```
git clone https://github.com/dmitrivanov/academic-advisement-system.git
cd academic-advisement-system
```

Alternatively, download the repository ZIP from GitHub, extract it, and open the extracted folder in PowerShell.

2. Create and activate a virtual environment

```
python -m venv venv
.\venv\Scripts\Activate.ps1
```

If script execution is blocked:

```
Set-ExecutionPolicy -Scope Process -ExecutionPolicy Bypass
.\venv\Scripts\Activate.ps1
```

This policy change lasts only for the current PowerShell window.

3. Install dependencies

```
python -m pip install --upgrade pip
python -m pip install -r requirements.txt
```

4. Configure local accounts

```
$env:SESSION_SECRET="replace-this-for-any-shared-environment"
$env:APP_USERNAME="admin"
$env:APP_PASSWORD="admin"
$env:TESTER_USERNAME="tester"
$env:TESTER_PASSWORD="tester"
```

CUNY Beyond exploration does not require login. These demonstration accounts provide access to the linked authenticated application.

Optional AI functionality:

```
$env:GEMINI_API_KEY="your-Gemini-key"
```

5. Create and seed the database

```
python seed_database.py
```

6. Start the server

```
python -m uvicorn faq_fallback_api:app --reload --port 8000
```

Keep PowerShell open while testing.

7. Open CUNY Beyond

Open <http://127.0.0.1:8000/cuny-beyond>.

For authenticated pages, use <http://127.0.0.1:8000/login> with admin / admin or tester / tester unless you changed the environment variables.

8. Reproducible chatbot test

1. Select **High-school student**.
2. Enter Registered Nurse or choose it as a quick option.
3. Answer the employment question.
4. Select skills such as **Helping people** and **Communicating ideas**.
5. Select a prior-learning option or **None of these**.
6. Generate matches and confirm Nursing A.A.S. appears with official-source information.

Stop and restart

Press Control+C. Later run:

```
cd academic-advisement-system
.\env\Scripts\Activate.ps1
python -m uvicorn faq_fallback_api:app --reload --port 8000
```

Troubleshooting

- python not found: reinstall Python with PATH enabled or use py instead of python.
- Activation blocked: apply the process-scoped execution-policy command above.
- Missing module: activate the environment and reinstall requirements.txt.
- Empty data: rerun python seed_database.py and restart.
- Port in use: use port 8001 in both server command and browser address.
